

San Group Channel/Lap Siding

San Group Channel/Lap Siding builds on the depth of our kiln dried Western Red Cedar product line. San Group Channel/Lap Siding is milled with exacting specifications to provide ease of install with San Group's high standard of fit and finish. San Group Channel/Lap Siding profiles bring to life the classic look of board and batten siding in this re-sawn textured panel. Lap siding provides excellent weather protection and breathability with a choice of both vertical and horizontal application.

Combining the exceptional beauty and outstanding performance of Western Red Cedar with San Group's manufacturing excellence produces a reliable, consistent product. As one of the world's foremost suppliers of Western Red Cedar, San Group has a reliable, responsibly harvested fiber supply to provide the perfect product for all applications.

A SMART CHOICE FOR ALL CLIMATES

San Group Channel/Lap Siding

BEST CHOICE FOR APPEARANCE

San Group Channel/Lap Siding is manufactured with the finest Western Red Cedar to provide the ultimate in quality appearance. Consistently manufactured to exacting standards through our kiln & planer, value-added facilities. Western Red Cedar delivers on not only its exceptional building properties but its beautiful rich color. Properly finished and maintained it ages gracefully and can be enjoyed for many years. San Group Channel/Lap Siding features straight even grain, uniform texture coupled with select grade knots. San Group Channel/Lap Siding has a re-sawn textured face which adds a appealing natural sawn appearance to any finished project. The reverse face has centered V-Groove as relief supporting best-in-class installation.

BEST FOR QUALITY & PERFORMANCE

One of the easiest woods to work with. Western Red Cedar is dimensionally stable, lightweight, strong, versatile and is naturally resistant to decay and insect damage.

San Group Channel/Lap Siding is to easy to saw, glue, join and accept nails and most other fasteners alike. The cellular structure and insulation value of Western Red Cedar featured as paneling, ceiling or siding in your building or project translates to a desirable coolness in summer and comforting warmth in winter. Western Red Cedar also suppresses and absorbs sound.

FINISHING & MAINTENANCE

Western Red Cedar is pitch and resin free, making it an excellent base for paints and stains. All finishes and paints are recommended to be applied within two weeks or sooner of installation. Longevity and performance increase exponentially with application to un-weathered product. Power washers are not recommended for use on Western Red Cedar.

INSTALLATION

Tongue and Groove is widely used for its appearance and versatility.

San Group Channel/Lap Siding can be installed horizontally, vertically or diagonally with each application giving a pleasingly distinct effect.

IMPERIAL SIZE (Nominal inches)	IMPERIAL SIZE (Actual inches)	DRESSING	SEASONING	PCS PER BUNDLE	PCS PER PACKAGE	LENGTHS
1X8	11/16X7 ^{1/8}	Resawn Face/ Smooth Back	KD	6	180	8-20PTL
1X10	11/16X9 ^{1/8}	Resawn Face/ Smooth Back	KD	5	150	8-20PTL

BEST FOR THE ENVIRONMENT

Wood harvested from responsible sources is by far the best building choice. Wood is a natural, renewable resource that once harvested can be replanted for use of future generations.

San Group, as a responsible, good neighbor, meets the highest environmental standards on harvesting set out in British Columbia. Western Red Cedar's natural oils act as a preservative and protection against decay and insects eliminating the need of harmful chemical treatments. For best results, Western Red Cedar should be coated on all sides prior to installation. Factory finishing, where available, is preferred and recommended. Corrosion resistant nails such as hot-dipped, galvanized aluminum and stainless steel are also recommended. More detailed information about finishing and maintenance is available from your San Group Sales Representative.
